

# MEG 342C QD-OLED

BRILLIANCE MADE POSSIBLE

VESA CERTIFIED  
DisplayHDR

# 5 Minutes Highlight

## 01 Stunning visual, goes to next level

The MEG 342C QD-OLED is one of the latest entries to **MSI's renowned QD series**, combined with the latest **OLED panel technology**, these displays exhibit the best picture quality when gaming and provide an ultimate immersive gaming experience with **sharp picture quality and vivid color**.

## 02 Fastest Ever

The OLED panel breaks the limit of response time that LCDs can't. **Up to 0.03 ms GtG** response time. Combined with the native **175Hz refresh rate** gives you the **fastest and smoothest** gaming experience.

## 03 Unique Design, new SpectrumBar

The new RGB lighting design lets **users customize the RGB lighting effect** or turn on the **Glow Sync mode** for the content on the screen to sync with the RGB lightbar.

## 04 Great Connectivity

With rich I/O connectivity, enjoy the full bandwidth **HDMI2.1** and also 4 **USB 3.2 Gen 1** ports for connecting different devices. The **USB type-c** port does not only support **DP alt mode** but also charging devices by **Power Delivery** technology (up to **65W**)

## 05 MSI exclusive Gaming Intelligence

From **gaming assistance** to **OLED care** function, feel free to control everything with a few clicks. The **MSI-exclusive Gaming Intelligence APP** can easily activate many useful functions and even adjust monitor settings. **Built-in light sensor** and **ANC microphone** give you a better user experience.

# MEG 342C QD-OLED

GAMING MONITOR

# Stayed with gamer, made to game.

MSI is a worldwide leading gaming brand.  
We stay with gamers and always improve.

The only thing we care about is gamer experience.

## 34-inch ultrawide monitors for better user experience

Suitable for gaming, home entertainment and multi-tasking

**Gaming**

The 1800R ultrawide 21:9 aspect ratio provides a great game scene in **RTS/MMORPG/Racing** games and also ultra-fast 0.03 GtG response time lets gamers fully enjoy the zero motion blur in fast pace games e.g., **shooting game/MOBA** which games required precise control and clear images.

**Entertainment**

QD-OLED's perfect color performance is suitable for home entertainment like **watching movies/videos**. Enjoy the HDR content with QD-OLED's high contrast and incredible color performance on a 1440p resolution display.

**Multi-tasking**

Great I/O connectivity and built-in **KVM** switch allow different user scenarios and enjoy the **PBP** function and fast switch different devices. A **golden 21:9 aspect ratio** is the best combination for splitting windows and applications.

**LCD**

Conventional Monitor

QD-OLED

## TRUE BLACK

### The incredible contrast

Unlike conventional LCD displays, QD-OLED can achieve pixel-dimming level control and give you pure black scenes without any backlight bleeding that happened commonly in the LCD monitor.

The MEG 342C QD-OLED provides extremely high contrast and is certified VESA DisplayHDR True Black 400.

Thanks to the pixel level dimming, MEG 342C QD-OLED can present better contrast with greater color performance. Accurately, Vivid, and Life-like.

VESA CERTIFIED

DisplayHDR™

## FASTEST THAN EVER

### Ultimate speed and response time

The reason OLED provides faster response time is through its OLED mechanism of emitting light. The traditional LCD's response time is limited by its liquid crystal technology.

Even the latest fast liquid crystal technology is still slower than new OLED technology. Each OLED pixel is emitted individually and provides an extremely clear image with a faster response time.

## ClearMR 9000 Certified

CLEARMR PROVIDES TRUE QUALITY METRIC FOR MOTION CLARITY

VESA's ClearMR is a new standard for display motion performance. MEG 342C QD-OLED passed strict tests and successfully got the ClearMR 9000 certified.

The CMR range represents a range of blur performance based on the ratio of clear pixels versus blurry pixels as a percentage.

VESA CERTIFIED

# ClearMR 9000

Conventional

Original Crosshair

Smart Crosshair

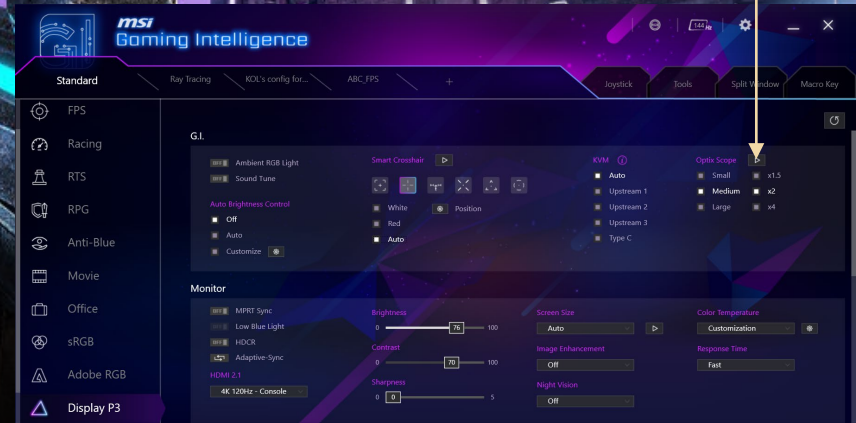

## Smart Crosshair

Through AI calculation, the crosshair automatically changes color, **making it visible at any time**. If the color of the aim dot overlaps with the background color, it will be problematic for aiming.

# Optix Scope

The built-in crosshair **provides multi-stage zooming with shortcut keys** to quickly activate the magnification. It's a monitor overlay and is **not** dependent on any games or software. Have the advantage of seeing a bigger hit-box than your opponents.

# See Clearly in the Dark

Whether your entire screen is dark, or just a few portions have heavy shadows. Let the world's first smart black tuner brighten your day by bringing out the fine details in dark areas.

Normal - Hardly see

Night Vision

Black Tuner - Over exposed

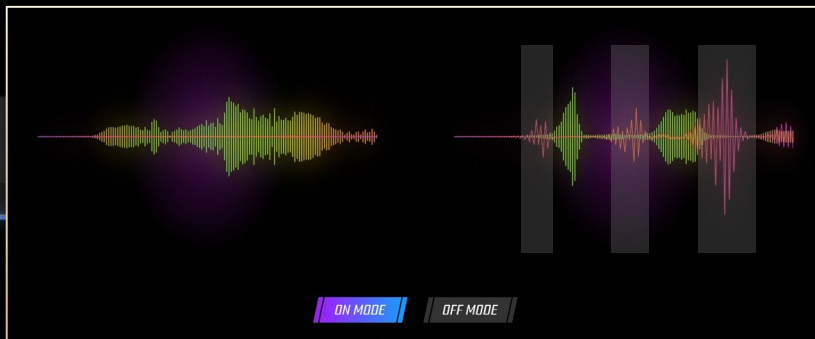

## Smart Brightness

The MSI Gaming monitor has a built-in Light sensor that can automatically detect the ambient light in the room and adjust the screen **brightness** and color **temperature** to the appropriate level.

# AUDIO ENHANCEMENT /

By built-in noise cancelling microphone, enhanced the quality of communication.

## Sound Tune (Hardware ANC)

Eliminating all obstacles to communication, the MSI monitor eliminates background noise through AI calculations and helps communication between teammates with more refined sound quality to achieve the best teamwork for the final victory..

# CONNECTIVITY /

MSI monitors featured great connectivity with different devices.

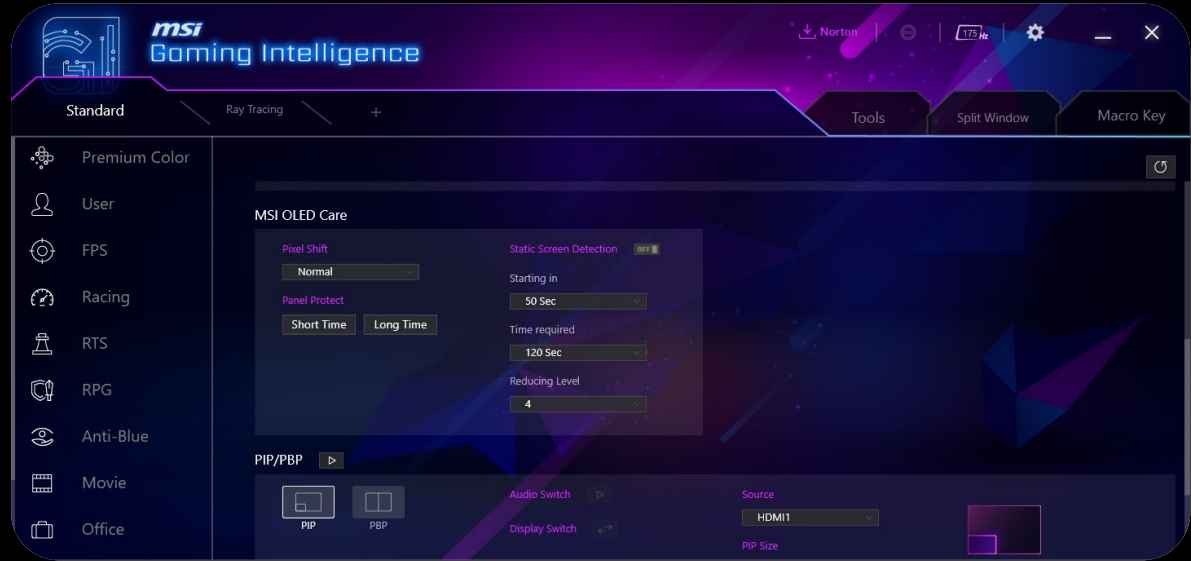

Type-C

DP or HDMI  
+ Type-B

Control multiple devices via one set of keyboard, mouse, and MSI gaming monitor.

## OLED CARE

When talking to **OLED**, everyone is concerned about the risk of burn-in. If uses the OLED monitors properly, the risk of burn-in will greatly decrease. Below let us introduce MSI OLED CARE which how to help you maintain your OLED monitors.

## Pixel Shift

Pixel Shift moves the pixels of the screen at regular intervals. When the pixel moved, the images would not be shown in the same position. Prevent the pixels from always showing the same images.

\*The border of the panel will remain 8 pixels for shifting which is not the dead zone. This design can avoid sacrificing the content or image size but still do the pixel shifting for preventing pixel aging.

## Panel Protect

To maintain panel image quality, panel protect function will pop up an notice on screen to remind user to activate when monitor using over 4 hours (Short time) / 1500 hours (Long time).

Users can decide to activate now or until 4th notification (16 hours later) pop up then pixel protect function will be activated mandatory.

## Static Screen Detection

This function will detect moving visuals that are on the screen. If it detects there are always static images on the screen for a period of time, the monitor will reduce the brightness to prevent screen burn-in.

## Panel Protect

msi

To have a better user experience when activating the panel protect function, SpectrumBar will show the current progress of the panel protect function.

This can help the user to recognize the approximate progress now.

# Better Gamer Experience

Alienware's QD-OLED doesn't provide the KVM function to users but MSI did. KVM is a useful function and allows users to control multiple devices via a keyboard and mouse that connect to a monitor. Also, MSI's QD-OLED monitor provides USB Type-C port for PD Charging (up to 65W) and display function. It's very useful for users if they have gaming laptop or any devices required a type-c charging

# Better Connectivity

Hardware Unboxed said MSI had advantages in this QD-OLED competition because MSI's monitor has great connectivity – HDMI2.1, Type-C Charging and USB ports for KVM.

**7 QD-OLED burn concern**

Discussion

So I am looking into getting the Alienware \_DW or the new \_DWF QD-OLED monitor. Two days a week I am working from home with software development. How likely do you think I will manage to get burn in? I am gaming around 10-15 hours a week, mostly in the weekends. And I often play different games. So my concern is with the office work two days a week

Metolane · 22 days ago

Do they have any info on warranty? Especially concerning burn-in, as as far as I know, only the Alienware monitor's mentions burn-in on their warranty. If MSI doesn't offer that it's even more difficult to justify the price premium IMO.

2 ↓ Reply Share ...

JAM442 🐱 +1 · 24 days ago

Did he mention if it has a Burn-In warranty, or a Price?

↑ 1 ↓ Reply Share ...

DreamyWolf 🦊 · 25 days ago

Anybody have any info if it also has burn-in warranty like Alienware?

ArchAngel 4 天前

I still need to know how well this monitor will mitigate burn in.

sword\_2020 🍀 +2 · 1 mo. ago

indeed i think it's rumored to be \$800? i got my dwf for \$999 and am not sure if it's worth it but more competition in the high end monitor space is always welcome, even if it's the same monitor at 3 different price points lmao. i was hoping that dell's burn in warranty would become standardized as well but we will see if that happens haha

# OLED burn-in risk and comparison

When comparing between sets of the same brand (Sony ), burn in of WOLED is faster and stronger than QD-OLED.

Even though QD-OLED has the highest luminance among '22 Sony OLED

Result of RTINGS does not mean that QD OLED is more disadvantageous to burn in than WOLED..

## 【 Result of RTINGS Test @2400Hr 】

### '21~'22 Sony Products Burn-in level
