# Safety

Please read all of the safety and operating instructions before using your device:

1. Besides the removal of the battery cover, do not open the device or attempt to repair or service it.
2. Only place the main device in a dry location. Only the water-sensing probe can be in contact with water.
3. Do not submerge the main device in liquid or attempt to clean it with liquids or solvents. To clean the device, remove the batteries and use a damp towel.

# Before you Begin

Plan the location of your water sensor:

1. Insert batteries before mounting.
2. Make sure the water sensor is placed in a location that has a consistent and adequate Wi-Fi signal.

# Wireless Installation Considerations

The mydlink Wi-Fi Water Sensor lets you monitor for water in various locations from virtually anywhere. Keep in mind that the number, thickness and location of surrounding buildings, foliage, or other nearby objects that the wireless signals must pass through may limit the range. Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business area. The key to maximizing wireless range is to follow these basic guidelines:

1. Keep the number of walls and ceilings between the camera and the hub to a minimum.
2. Building materials make a difference. A solid metal door or aluminum studs may have a negative effect on range. If placing a camera indoors, try to position it so that the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.
3. Keep your product at least 1 to 2 meters (3 to 6 feet) from electrical devices or appliances that generate RF noise.

# Getting Started

To mount your water on a wall, please follow the steps below. It is recommended that you configure the water sensor prior to mounting.

## Mounting the Water Sensor

### Step 1

Identify and mark the location where you want to install the bracket, ensuring that the water-sensing probe cable length is long enough to reach the desired location where you want to detect the presence of water.

**Note:** You can extend the cable length by using a 3.5 mm (0.125 in) stereo audio extension cable.

### Step 2

Using a 6 mm drill bit, drill two holes that are 2.5 cm deep over the marks. For a plaster, drywall, or concrete wall, insert plastic anchors to support the screws first.

### Step 3

Twist the screws into the wall or anchors, making sure to leave enough clearance between the screw head and the wall.

**Step 4**

Align the screws with the largest holes on the back of the water sensor. Slide the sensor down to lock it into place.

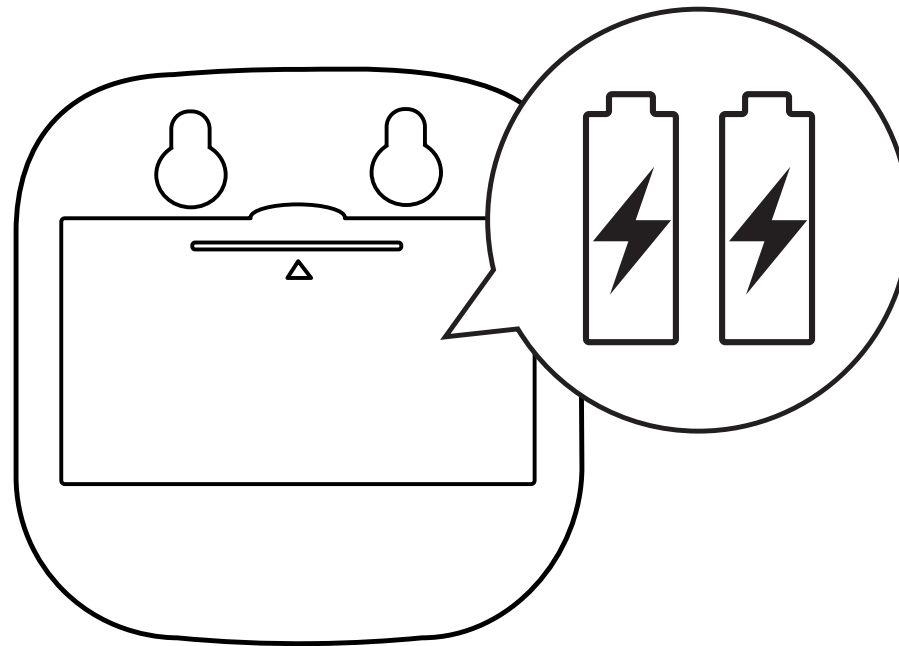

**Step 5**

Assure that the water sensing probe is plugged in securely to the port on the bottom of main sensor unit. Adjust the position as desired.

# Installation

## Powering the Water Sensor

Remove the battery cover by gently pressing down on the tab.  
Insert the two AA batteries and reattach the battery cover.
