

Acer P6 series projectors deliver unrivalled visual quality in any environment, maximizing the impact of projections and presentations for successful business meetings or brainstorming sessions.

- Hidden dongle design
- Maximum image quality and sharp details with LumiSense+ technology
- Wireless projection capability with optional dongle
- 4-Corner Keystone and H/V Keystone Correction
- Eco-friendly design
- Support for HDBaseT technology (on P6600)

Projector P6 series

Premium projector
experience

Ideal for both small and large spaces, the P6 series comes with a hidden dongle design that maintains the projector’s sleek look even when cables are connected.

Light Sensor

Expressive projection experience

With up to WUXGA resolution and 16:10 aspect ratio, Acer P6 projectors deliver presentations that will make an impression in any business meeting. 5000 ANSI lumens brightness and 20,000:1 contrast ratio with Dynamic Black technology further enhance images with crystal clear clarity and sharp detail.

LumiSense+ technology allows the projector to dynamically optimize projected images based on ambient lighting condition and on projected content, for the best viewing experience.

Maximum image quality is guaranteed by Acer ColorBoost 3D and Acer ColorSafe II, that enhance image performance, even when displaying 3D content or after extended use of the projector.

Acer P6 projectors come with two built-in 10W speakers, making sound loud and clear, so that your message always gets through to your audience.

Installation flexibility

With the P6 series, projector set-up is no longer an issue. 4 Corner and H/V Keystone Correction easily correct any horizontal or vertical image distortion up to 30°, so the projected image is perfectly rectangular no matter where the projector is placed.

The Vertical Lens Shift enables the projected image to be shifted vertically in its original format and size without any distortion, by using control wheels on the housing. When the projector is ceiling mounted, Auto Ceiling Mount Correction can detect its position and automatically adjust the orientation of the image, while the top loading lamp design simplifies lamp replacement. All cables can be neatly stowed under the detachable cover, avoiding tangles and maintaining the projector’s sleek look. The recess can also house a dongle, further enhancing the stylish look

Enhanced wireless capability

Pairing the P6 projectors series with the wireless dongle, users can benefit from wireless projection¹, breaking free from the constraints of troublesome wires and making sharing easier.

Thanks to the eDisplayPro² app, users can stream documents, videos, and photos from their mobile devices. Additionally, it allows up to four users to display their content on screen at the same time, which is especially useful for comparing different projects or brainstorming during a meeting.

Alternatively, with Mirroring Display compatible devices³ users can broadcast any media directly onto the big screen, and enjoy a better viewing experience.

Easy remote management

The Acer P6 projectors can be remotely monitored and operated using Crestron RoomView®. It offers an e-mail alert system and enables an entire fleet of projectors to be managed, controlled and powered on/off via LAN. Furthermore, using the Acer LAN Control web application, users can control a single projector remotely via LAN. This helps companies to save time and resources without extra software installation.

Superior usability

The P6600 supports HDBaseT, a connectivity standard designed to offer better usability. HDBaseT technology transmits multiple high quality signals (video, audio, Ethernet and various control signals) through a single LAN cable for up to 100 metres. HDBaseT technology is capable of delivering best quality signals over long distances to up to 100 metres, for great quality images at zero latency with any content.

Eco-friendly operation

The Acer P6 projectors come with a number of features that make them environmentally friendly. Acer EcoProjection dramatically reduces standby power, while Acer ExtremeEco lowers lamp consumption by up to 80% and extends the lifespan of the lamp by up to 4,500 hours, keeping costs under control and ensuring long-term, dependable projector use.
